Professional Summary

Dedicated and results-driven DevOps Engineer with 2+ years of hands-on experience in streamlining CI/CD pipelines, managing AWS cloud infrastructure, and supporting containerized microservices. Seeking a challenging role to leverage DevOps and cloud expertise in a dynamic team.

Technical Skills

- Cloud Technologies: AWS
- Build Tools: Maven
- Container Technologies: Docker, Kubernetes, Helm
- Scripting: Shell, Python
- Version Control: Git, GitHub, GitLab
- Configuration Management: Ansible
- Infrastructure as Code: Terraform
- CI/CD: GitHub Actions, Jenkins, Argo CD
- Monitoring: Prometheus, Grafana, CloudWatch
- DevSecOps: SAST (SonarQube), DAST (OWASP ZAP), Trivy

Professional Experience

EXL Service – Associate Analyst – DevOps & Production Support

April 2024 – Present

- Streamlined CI/CD pipelines for Java-based applications using Gradle, achieving a 20% reduction in build and deployment time.
- Strong experience in containerizing microservices architecture, supporting services for 2 development teams.
- Supported Kubernetes adoption, contributing to 20% cost efficiency.
- Implemented Infrastructure as Code for microservices and Kubernetes infrastructure on AWS.
- Hands-on experience with AWS and AWS networking, including VPC, Load Balancing, Compute, and IAM.
- Introduced Git best practices, improving collaboration and traceability; assisted teams with branching strategies and webhook configuration.
- Helped junior DevOps engineers and development teams with Kubernetes onboarding and PoCs.
- Conducted knowledge-sharing sessions on CI/CD pipelines and automation for team members.
- Resolved critical production incidents, ensuring system availability and minimizing business impact.
- Received commendation for resolving critical AWS VPC peering issues for development teams.
- Worked with Route53 and Hosted Zones, integrating Route53 with ALB for custom domains in Kubernetes.
- Implemented Kubernetes Ingress for multiple microservices.
- Set up Terraform remote backend and state locking using AWS S3 and DynamoDB.
- Managed Terraform remote state for multiple development teams.
- Used AI tools to assist with automation, troubleshooting, and documentation in DevOps workflows.

Technical Writing & Blogging

- Write technical blogs on DevOps, Cloud, MLOps, and AI Engineering
- Publish hands-on articles on CI/CD pipelines, Kubernetes, AWS services, and MLOps workflows
- Focus on practical implementations, system architecture explanations, and best practices

---

Education

Bachelor of Computer Applications (BCA – Computer Science)
Arcade Business College
May 2020 – July 2023

Certifications & Hands-on Learning

- Certified DevOps Professional – Oracle Cloud Infrastructure
- Docker – Level 1 | KodeKloud Engineer
- Kubernetes – Level 1 | KodeKloud Engineer
